Your Productivity Solution.

Ultra U-arm DR

KONICA MINOLTA

Ultra U-arm DR

Taking Digital Radiography to the Next Level

Improve Radiology Workflow

The freedom to maneuver the hardware allows for optimal flexibility for patient examinations; patients can be standing, sitting or in the lying position. The system is designed to constantly maintain alignment between the x-ray tube and the image receptor, regardless of the angle of the image receptor or the u-arm tilt positions.

The U-Arm DR features user-friendly controls that operate dual speed motorized movements, while the intuitive anti-collision system makes patient positioning quick, easy, and safe. The ease of use facilitates a more confident diagnosis. Additionally, the patient table allows for the patient to be moved into any required position without the need for repositioning.

Superior Image Quality

The **Ultra U-Arm DR** features state-of-the-art functionality for supreme digital imaging. The Ultra U-Arm DR is designed for all imaging applications. Avoid the time-consuming demands of film processing and enter the digital world of Direct Radiography. The Ultra U-Arm DR provides digital images within seconds of exposure.

Feature-Rich Digital Radiology

Advantages of the Ultra U-Arm DR include superior image quality, with greater visualization of soft tissue and bones from the same study exposure. The integrated system of generator console with the workstation in a single unit improves productivity and decreases the chance of operator error. With image display within 3 seconds of exposure, the DR enables high-throughput performance, enhancing practice workflow. The enclosure keeps the panel safe, enhancing image quality, increasing its longevity, and assuring system stability.

Pediatric Imaging Package

The Pediatric Imaging Package is ideal for any facility that is dose conscious and working on children. With the use of the latest hardware and software technology. The pediatric offering aids in the effort to reduce radiation dose in children.

Improve Your Workflow, Drive Your Business

Make your move into the digital world today. Our technology is leading edge. Our support and upgrades are state-of-the-art.

The **Main Column** is a floor-to-wall mounted system that supports vertical movement with a dual-speed motorized swivel arm for accurate and easy setting.

The **X-Ray Generator** is compact and can supply 50-80kW of output power.

The **Collimator** features linear laser beam with light field indicator for optimal patient positioning.

Motorized Swivel Arm

- Dual-speed motorized movements for SID adjustment, arm elevation, and arm rotation.
- Source-to-image Distance (SID) is 40"-72" inches and is continuously adjustable by operator hand control, allowing for a range of radiographic studies.
- Rotation Angle is 150° (90° +/- 30°)

AeroDR HQ Panel Specifications

- CSI Technology
- Pixel Pitch 175 um
- Pixel Size 2,428 x 2,428
- Image Area 424.9 mm x 424.9 mm
- Typical DQE 65%@ 0cycle/mm

Options Available

- Mobile Hi/Low Table
- Weight Bearing Stand
- Stitching Software
- DAP Meter
- Pediatric Imaging Package
- Three Knob Collimator

Table Side Control

- Technique View and Change
- Angle Read-Out
- Positioning Pre-Sets
- Custom Views
- Generator Control

Mobile Patient Table Standard

- The table-top composition is a laminated structure with a patient capacity of 440 lbs.
- The Dimensions of the table – 78.7"L x 25.6"W x 27.6"H

Power Line Requirements

Line voltage: 208; 230; 240 VAC
(single phase) - Stand
Power Consumption: 1.5 KVA
Three Phase 480v Generator

ULTRA U-ARM DR features and benefits

- Patient Side Control
- Generator Control
- Auto-Positioning Control
- Off-Center Imaging
- Auto-Stitching
- AEC
- Collision Sensors
- Angle Read-Out
- Single/Dual Grid
- Advanced Processing Algorithms
- Remote Control
- Pediatric Imaging Package
- DAP Meter
